Requirements:

at least:

Geforce 8600gt (or simliar)
2GB RAM
1 GB of hard drive space

Controls:

E- Use (or drop object)
LeftShift- Run (not always possible)
LeftClick- throw object (if in hand)
W,A,S,D – Walk
Space – Jump
Esc - Leave game

Story:

Wooden Floor is a horror game inside a old house that seems normal but the further you progress into the Game you start to realize that rooms change if you close a door behind you and whole corridors appear out of nowhere. Not being able to predict what is going to happen next or where you are heading for you need to make your way through the increasingly maze-like becoming house to find a way out of this bad dream that you just woke up into. The only thing that goes with you is the wooden floor underneath your feet.
