**Introduction**

The Grumman EA-6B is a modification of the basic A-6 airframe into a long-range, all-weather, advanced electronic countermeasures platform. It is the U.S. Navy and Marine Corps’s primary electronic warfare platform and has seen action in nearly every conflict since its introduction in 1971. A total of 170 examples were produced and the aircraft is still in active service.

The Virtavia EA-6B Prowler is a fully 'native' FSX release, which includes visual effects such as self shadowing, bloom and bump mapping.
SUPPORT

Should you experience difficulties or require extra information about the Virtavia EA-6B Prowler, please e-mail our technical support on tech.support@virtavia.com

COPYRIGHT INFORMATION

Please help us provide you with more top quality flight simulator models like this one by NOT using pirate copies. The flight simulation industry is not very profitable and we need all the help we can get. Please - help us grow by buying a legitimate copy.

These files may not be copied (other than for backup purposes), transmitted or passed to third parties or altered in any way without the prior permission of the publisher.

The source code for this product is closed. No modifications or reverse engineering may be carried out without prior consent from Virtavia.

All rights reserved – copyright Virtavia 2015
Package Contents

The Virtavia EA-6B Prowler package contains six model variants to represent the various stores loadouts typically carried by this aircraft:

- 2 fuel tanks, 3 ECM pods
- 2 AGM-88 HARM missiles, 3 ECM pods
- 5 ECM pods
4 AGM-88 HARM missiles, 1 ECM pod

2 fuel tanks, 3 ECM pods

2 AGM-88 HARM missiles, 3 ECM pods
**Exterior Model**

The exterior model has all the usual animations such as ailerons, elevators, flaps and speedbrakes. There are some additional animations on the model:

**Crew Access**

- `shift-e`: Front canopy and access plate
- `2nd Exit (shift-e then 2)`: Rear canopy and access steps

**Tail Hook**

Normally defined as Shift-Q but can be reassigned to ‘T’ if desired.

**Folding Wings**

Normally defined as Ctrl-Shift+K but can be reassigned to ‘F’ if desired. Only works when on the ground.

**Exterior Lighting**

Pressing the L key will turn on all lights. You may however wish to turn them on using the appropriate switches in the cockpit, as the L key also turns the on navigation, landing lights and flood lighting in the cockpit, which should ideally be switched separately.

Shift-L will toggle the nav lights and the cockpit lights.

Ctrl-L will toggle the landing light.

Please refer to the cockpit section of this manual for information regarding light switch location.
**Alternative Viewpoints in FSX**

There are several different ways of looking at the aircraft and the cockpit, select these alternative views by right-clicking in an empty area and picking the 'Aircraft' menu for external views and the 'Cockpit' menu for views inside the cabin. It is possible to zoom and pan as normal in these alternative views. Cycle through the available ones by pressing the A key.

**External View Options**

It is possible to pan and zoom as normal in all external views.

‘Dirty’ view, rear - perfect for viewing the flaps & gear all-out

Tail View - up and behind the Prowler
Front, left side view – close-up of the crew

Nose View – head on

Front View - down low
Front View - up high

Interior Views

It is possible to pan and zoom as normal in all interior views.

Virtual Cockpit View

Front RI Operator's Seat View
Moving Around the Cabin

Shift-Enter and Shift-Backspace : moves up and down

Ctrl-Shift-Enter and Ctrl-Shift-Backspace : moves side to side

Ctrl-Enter and Ctrl-Backspace : moves back and forwards
Virtual Cockpit Functions

**Pilots Panel**

1) Landing Gear Warning Lights.
2) Fuel Quantity Gauge.
3) Landing Gear Lever.
4) Annunciators / Angle of Attack Indexer. Lamps for low alt – no gear, Speedbrake toggle (mousable) and Tailhook toggle (mousable).
5) Angle of Attack Indicator.
6) Radar Altimeter.
7) Main Engine Condition Indicators. RPM, EGT and Fuel Flow.
8) **Standby Engine and Fuel Quantity Gauges.**
9) **Airspeed Indicator.**
10) **Altimeter.**
11) **Vertical Speed Indicator.**
12) **Artificial Horizon.** With knob to adjust fixed horizon bar.
13) **Horizontal Situation Indicator (HSI).**
14) **Simulated Radar Gauge.** Toggle 3 states by clicking left/right sides.
15) **Pedestal Gauges (hidden).** Standby Airspeed Indicator, Standby Altimeter, Rudder Position Indicator and Pitch Trim Indicator (mousable)
16) **Annunciator Block.** Left to right – Overspeed Warning, Left Engine Fuel Shutoff (mousable), Stall Warning, Master Warning, Right Engine Fuel Shutoff.
17) **Standby Artificial Horizon.**
18) **G-Meter.**
19) **Annunciator Block.** Various.
20) **Clock.**
21) **Radio Set.** Can be used to set NAV1 and NAV2.
22) **DME Indicator.** Displays DME data for NAV1 and NAV2.
23) **Flaps Position Indicator.** Mousable.
24) **Tailhook Control Lever.**
Two-D Panel Pop-Ups in VC

The following keystrokes will toggle the 2D pop-up panels associated with the accompanying 2D panel suite:

- **Shift-2**: Autopilot panel
- **Shift-3**: Electrics and transponder
- **Shift-4**: Radios and Autopilot panels
- **Shift-5**: Standard FSX GPS unit
- **Shift-6**: RIO Radar Display (tracks air traffic only).

**RIO Panel • Front**

1) Autopilot Annunciator Panel.

2) Fuel Quantity Gauge.

3) Clock.

Virtavia EA-6B Prowler – DTG Steam Edition
Manual Version 3.0
**RIO Panel • Left Rear**

1) Radio Magnetic Indicator (RMI).

2) GPS Display. Standard display from FSX GPS with mousable buttons along top edge.

3) Radio Set. Can be used to set NAV1 and NAV2.

4) Airspeed Indicator.

5) Altimeter.

6) DME Indicator. Displays DME data for NAV1 and NAV2.

7) Flaps Position Indicator. Mousable.

8) Standby Artificial Horizon.

9) Clock.
1) Traffic Radar Scope. Displays local air traffic. Knobs toggle range, aircraft tags and brightness.

2) Radio Magnetic Indicator (RMI).
Two-D Panel and Pop-Ups

The instruments are the same as in the virtual cockpit with the addition of Sim Icons top right for ATC, Map, Checklist and GPS. Other Sim Icons are available lower down, along the bottom edge of the HSI, these cover the Electrics (Starters) Panel, Autopilot mini-panel and the main Radios Stack with Autopilot. Additionally, there is a Sim Icon resembling concentric circles on the top right of the radar screen, this toggles the radar gauge to appear in the centre of the screen.
The image below shows the full range of pop-up panels available from the Sim Icons, or alternatively by using the following key strokes:

**Shift-2**: Autopilot panel

**Shift-3**: Electrics and transponder

**Shift-4**: Radios and Autopilot panels

**Shift-5**: Standard FSX GPS unit

**Shift-6**: RIO Radar Display (tracks air traffic only).
REFERENCE INFORMATION

Virtavia EA-6B Prowler Procedures

Engine Engine Start:

1. Ensure sufficient fuel for engine start.
2. Ensure battery and avionics switches are ON
3. Press the engine #2 starter
4. At 15% RPM switch on fuel supply for #2 engine
5. Observe engine auto-ignition at approximately 22% RPM, signified by spike in EGT
6. Monitor engine parameters, allow 30-45 seconds for engine to stabilize at ground idle (approximately 60% RPM)
7. Repeat steps for engine #1

NOTE: For simplified procedure, use Ctrl+E for auto engine start.

Takeoff at normal loaded weight of 50,000lbs (clean configuration):

1. Ensure sufficient fuel for the mission.
2. Set pitch trim to 3.0° aircraft nose-up.
3. Set flaps to TAKEOFF (Flaps position 1).
4. Slowly apply full power (press F4 to ensure throttle is fully-forward).
5. Begin to rotate the nose at 130 KIAS.
6. Un-stick will occur at approximately 140 KIAS.
7. Depress wheel brakes once airborne to stop wheels.
8. Retract landing gear.
9. Raise flaps at 170 KIAS, continue to climb.

Takeoff at high gross weight of 60,000lbs (wing and fuselage stores attached):

1. Ensure sufficient fuel for the mission.
2. Set pitch trim to 3.5° aircraft nose-up.
3. Set flaps to TAKEOFF (Flaps position 1).
4. Slowly apply full power (press F4 to ensure throttle is fully-forward).
5. Begin to rotate the nose at 145 KIAS
6. Un-stick will occur at approximately 155 KIAS
7. Depress wheel brakes once airborne to stop wheels.
8. Retract landing gear.
9. Raise flaps at 185 KIAS, continue to climb.
Climb (external stores on wing pylons and fuselage):

1. Climb at max power is authorized and recommended (Press F4 to ensure max thrust).
2. Maintain a moderate pitch angle until reaching 315 KIAS.
3. Maintain 315 KIAS using pitch until reaching desired altitude or cruise Mach number.

Cruise:

1. Once at desired altitude, slowly bring the aircraft level and trim as best as possible before enabling the autopilot.
   NOTE: If using autopilot vertical speed hold, manually reduce the vertical speed as you approach the desired altitude to assist the autopilot altitude capture mode.

External stores on wing fuel burn estimates

<table>
<thead>
<tr>
<th>Altitude</th>
<th>Airspeed</th>
<th>Mach number</th>
<th>Fuel Burn</th>
</tr>
</thead>
<tbody>
<tr>
<td>500ft</td>
<td>605 KIAS</td>
<td>.847</td>
<td>40.49 lbs/NM</td>
</tr>
<tr>
<td>30,000ft</td>
<td>306 KIAS</td>
<td>.790</td>
<td>14.73 lbs/NM</td>
</tr>
<tr>
<td>35,000ft</td>
<td>317 KIAS</td>
<td>.925</td>
<td>20.58 lbs/NM</td>
</tr>
</tbody>
</table>

Descent:

1. The EA-6B is not capable of descent rates exceeding -25,000ft/min without exceeding structural limitations.
2. For a fast descent, reduce thrust to idle and descend at a pitch of -25° whilst being mindful of the airspeed limitations.
3. Speed brakes can be applied to slow the descent. The speed brakes do not affect lift, only drag.

Approach and landing, 42,000lbs
(stores on wing pylons and fuselage, land-based):

1. Slow the aircraft to 250 KIAS or the recommended pattern speed.
2. Lower the landing gear at or below 200 KIAS.
3. Extend wingtip speed brakes (optional)
4. Set flaps to TAKEOFF (position 1) at 178 KIAS.
5. At landing weight of 42,000lbs with external stores attached, approach speed should be approximately 133 KIAS.
6. The optimum AoA (angle-of-attack) for approach in this configuration is between 18-24 units AoA.
   **NOTE:** AoA and pitch angle are different; your AoA can be significantly higher than your perceived pitch angle on approach.
7. At 10ft AGL, retard the throttles.
8. At landing weight of 42,000lbs with external stores attached, touchdown speed should be approximately 123 KIAS.
9. The EA-6B does not exhibit a significant ground effect, so flair of several degrees is required.
   **NOTE:** If sufficient runway length exists, aerodynamic braking (IE holding the nose off the ground as long as possible and using the fuselage to create excess drag) is authorized.
   **NOTE:** If using aerodynamic braking, DO NOT apply the wheel brakes until the nose wheels are in firm contact with the runway surface.

### Approach and landing, 38,000lbs
(stores on wing pylons and fuselage, carrier recovery):

1. Slow the aircraft to 250 KIAS or the recommended pattern speed.
   **NOTE:** The maximum aircraft gross weight for carrier recovery is 36,000lbs.
2. Lower the landing gear and tail hook at or below 200 KIAS.
3. Extend wingtip speed brakes.
4. Set flaps to TAKEOFF (position 1) at 175 KIAS.
5. At landing weight of 38,000lbs with remaining external stores attached, approach speed should be approximately 123 KIAS.
6. The optimum AoA (angle-of-attack) for approach in this configuration is between 18-24 units AoA.
   **NOTE:** AoA and pitch angle are different; your AoA can be significantly higher than your perceived pitch angle on approach.
7. At landing weight of 38,000lbs in clean configuration, touchdown speed should be approximately 118 KIAS.
8. The EA-6B does not exhibit a significant ground effect, so flair of several degrees is required.
   **NOTE:** Aerodynamic braking is NOT authorized on carrier recovery!
   **NOTE:** If recovering on a carrier, advance throttles to full and retract speed brake as soon as the wheels contact the deck. If cable is arrested, idle throttles and raise flaps.
   **NOTE:** Do not fold wings until flaps and slats indicate UP.
Virtavia EA-6B Prowler Reference

The Grumman EA-6B is a modification of the basic A-6 airframe into a long-range, all-weather, advanced electronic countermeasures platform. It is the U.S. Navy and Marine Corps primary electronic warfare platform and has seen action in nearly every conflict since its introduction in 1971. A total of 170 examples were produced and the aircraft is still in active service.

Specifications:

| Empty weight: | 31,160 lbs |
| Typical TO weight: | 50,000 lbs |
| Max TO weight: | 61,500 lbs |
| Fuel capacity: | 2,390 US Gal |
| Drop tanks: | 300 US Gal each |
| Initial climb rate: | 12,000 ft/min |
| Service ceiling: | 39,000 ft |

Aircraft Limitations

| Stall speed, clean: | 103 KIAS |
| Max gear extension: | 250 KIAS |
| Max gear retraction: | 280 KIAS |
| Max indicated airspeed: | 650 KIAS |
| Maximum speed: | Mach 0.90 at sea level |
| Maximum speed: | Mach 0.95 at 35,000 feet |
| Maximum G: | +6/-3 |

Notes on configuration and load-out

All applicable load stations are included in the configuration file. In the event the user wishes to use a model with particular weapon settings, they will need to add weight to the particular weapon station. The recommended weights for each load station are as follows:

<p>| Station_load.0 | Pilot | 205.00 lbs |
| Station_load.1 | Navigator | 210.00 lbs |
| Station_load.2 | ECM Op. 1 | 225.00 lbs |
| Station_load.3 | ECM Op. 2 | 195.00 lbs |</p>
<table>
<thead>
<tr>
<th>Station_load.4</th>
<th>Survival Gear</th>
<th>200.00 lbs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Station_load.5</td>
<td>Left drop tank</td>
<td>250.00 lbs</td>
</tr>
<tr>
<td>Station_load.6</td>
<td>Right drop tank</td>
<td>250.00 lbs</td>
</tr>
<tr>
<td>Station_load.7</td>
<td>5x AN/ALQ-99</td>
<td>2308.00 lbs</td>
</tr>
<tr>
<td>Station_load.8</td>
<td>3x AN/ALQ-99</td>
<td>1383.00 lbs</td>
</tr>
<tr>
<td>Station_load.9</td>
<td>2x AGM88 HARM</td>
<td>1600.00 lbs</td>
</tr>
<tr>
<td>Station_load.10</td>
<td>4x AGM88 HARM</td>
<td>3200.00 lbs</td>
</tr>
</tbody>
</table>

In the fuel load-out editor the drop tanks are listed as following:

External 1:  Left drop tank
External 2:  Right drop tank

**NOTE:** If you are using a model that does not have one of these fuel tanks, set the fuel level for the given tank to 0. You must do this as the fuel tank will always default to the maximum capacity of the tank.

**Autopilot**
Although this aircraft is equipped with an auto flight system, it is designed to be flown by hand through the majority of the flight envelopment. The auto flight system however, is fully functional and more than capable of controlling the aircraft’s axes of control. It is recommended that when attempting to use the auto flight to hold an altitude to level off as best as possible to avoid any pitch oscillations.

**Trim Characteristics**
The aircraft will require only small trim adjustments throughout its flight envelope, with the exception of landing, where the gear and flaps cause a nose-down tendency. The aircraft is capable of trimming +/- 12° in either direction; though it is highly unlikely that this much trim would be required at any phase of flight.

**General Notes on Handling**
The EA-6B flies very similarly to the A-6E Intruder. It is capable of most aerobatic maneuvers though these are strongly discouraged in normal operations. Intentionally stalling and spinning this aircraft is not authorized, though behavior in the stall is generally mild and all that is necessary is a deliberate effort to lower the nose and reduce the angle-of-attack.
