I am an Air Traffic Controller 4

ぼくは航空管制官

User manual

Start the game

- 1 The Title screen is displayed after the flying logo, so click the [START] button to start.

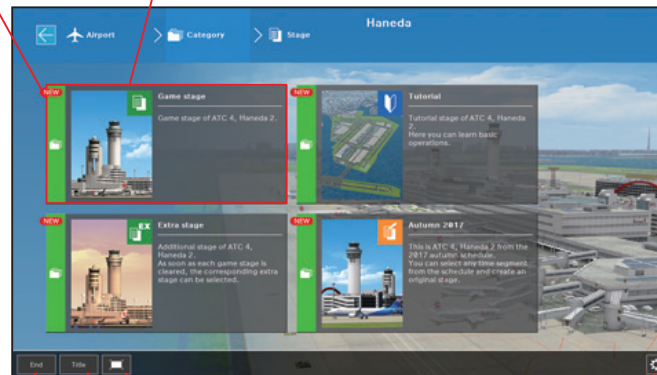

- 2 The airport selection screen is displayed. Click the [Haneda] panel.

Game menu functions and names

NEW
New panel.

Panel
The panels can be rearranged.
To move the panel, click, hold, and drag it.

End button

Title button
Returns you to the Title screen.

Screen mode switch button
Switches between Window and Popup in the menu screen display.

[Configuration] button
[See page16 for Configuration.](#)

Locked state
This panel cannot be selected unless certain conditions are met.

Start the game

- 1 If you are new to the game, click [Tutorial]. If you want to start the game, click the [Game Stage] panel.

- 2 The Stage screen is displayed. click the [Stage] panel. A locked Stage cannot be selected without playing and clearing its preceding Stage.

- 3 The screen to confirm the details is displayed. Click [START] to start the game.

*Extra Stage can be selected by clearing the corresponding Game Stage.
Ex) Extra Stage / Stage1 can be selected when you clear Game Stage / Stage1
*You can select [Create New] of the original Stage "Schedule / Autumn 2017"
when you clear Stage1 of Game Stage.
[See page14 for the original Stage.](#)

Basic ways to play

This game software aims to "make aircraft passage safe and smooth as an air traffic controller would." Give quick and accurate directions so as not to interfere with scheduled operations and so avoid the possibility of collisions between aircraft. Select an aircraft and click the Direction buttons, and the aircraft will be operated as directed. At the end of the assigned time, the Stage is cleared if the clearing conditions of each Stage are achieved.

General flow of air traffic control

DEL (Delivery)

Departure approval section

DEP (Departure)

Departure section

GND (Ground)

Ground section

APP (Approach)

Entry section

TWR (Tower)

Takeoff and landing section

Basic rules

If you give appropriate directions to the aircraft in your charged section, the score will be incremented. At the end of the assigned time of each Stage, if the clearing conditions such as the Efficiency Index and the Risk Index have been achieved, the Stage is cleared. However, the game will be over in the following situations.

- When the Risk Index reaches the upper limit
- When aircraft approach each other without sufficient spacing

Rating gauge

Time, Efficiency, Risk, and Score are displayed.

Radar window

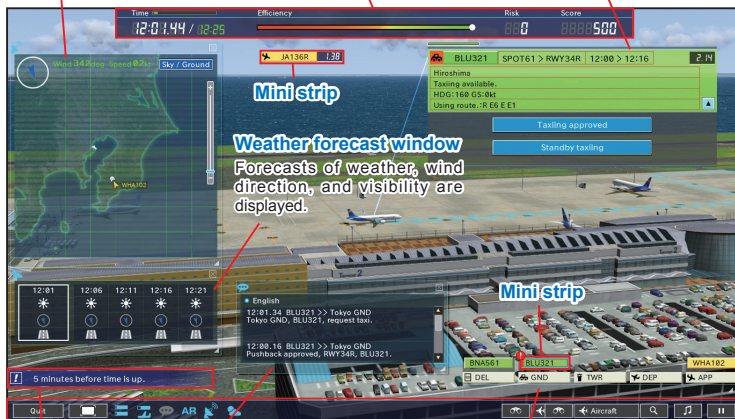

Airport information such as aircraft position, speed, and wind direction is displayed.

Strip

The strip (operation ticket) of the selected aircraft is displayed. You can give directions to the aircraft.

Weather forecast window

Forecasts of weather, wind direction, and visibility are displayed.

ATC window

The content of the radio messages are displayed.

*In the initial state of the game, the ATC window is not displayed.

Strip table

Mini strips are displayed in a row in each section.

App bar

The following items can be set: console display, viewpoint, volume, zoom, time control, game end, screen display.

Insert cut

Notifications, cautions, and warnings are displayed.

- Mini strip

BNA561 Click the flight number to open the selected aircraft strip. click again to deselect.
 BNA561

Strip

If the selected aircraft is in the "Charge Section", you can give directions. Arriving aircraft are colored orange, departing aircraft are green, and inter-spot aircraft are blue. Semi-transparent applies to "Auto Section" and the directions are given automatically.

*The Auto section is a section that is not handled by the player and so the player cannot give directions to the aircraft.

*Click the flight number to cancel the selection and switch from the strip to the Mini Strip.

Strip description

The direction buttons are displayed according to the aircraft status. These direction buttons cannot be clicked during radio communication. Aircraft waiting for directions will be automatically directed after a certain period of time.

Response gauge Flight number Use spot / Use runway Guidance start time (or appearance time) and estimated end time of guidance

Directions change according to the situation of the aircraft.

- Time limit

- White letters ... The aircraft still has time to spare.
 * See page8 for the Efficiency Index.

- Red letters ... The aircraft is delayed.

- Response gauge

Displayed for directions that are important for control. The quicker you respond, the higher score you obtain.

Introduction of each function(2)

- Section icon

- **Flashing** BLU321 Radio communication in progress

- **Lights red** RED332 Awaiting directions
 *Does not light up red for directions such as route change or visual approach.

- Flight number

- **Red letters** BNA561 The aircraft is delayed.

- **Red icon** BNA561 Dangerous for air traffic control. Risk Index increases.

Rating gauge

Time Stage assigned time and progress rate to the end. Green letters indicate the Stage end time.

Efficiency Index Indicates the status of the cumulative scheduled operation of the aircraft. The Efficiency Index decreases when a delay occurs for the assigned aircraft, and the Efficiency Index increases when the delay is eliminated. The Efficiency Index is expressed with gauges, with white circles indicating the current efficiency, with the area near yellow, an approximate guide to what is required to clear the Stage.
 *Yellow position depends on the Stage

Risk Index Rises when a dangerous condition (as in the following situations) occurs due to air traffic control. The game is over when the Risk Index reaches the upper limit.

- Abnormal approach between aircraft
- When handoff is performed automatically
- Go around using pilot judgment
- Takeoff in a tailwind
- Simultaneous use of crossing runways

Score Points will be added for specific instructions to the aircraft. In addition, bonus points will be added under certain conditions.

- Charge Section and Auto Section

Each Stage has "Charge Section" where directions can be issued to the aircraft and "Auto Section" where directions are automatically given and the player is not responsible for them. Direct the aircraft in your section to get more flights on time within the guidance time specified for each aircraft on the Strip.

*In the Stage where multiple sections are assigned, the guide time to the section that received the most recent direction is displayed on the strip.

Introduction of each function(3)

Strip table

The aircraft in each section is displayed in a Mini Strip.

Move position

Section button

Click and hold to swap left and right

*When you just click the [Section] button, you can mute the communication sound.

Radar window

Aircraft in the airspace are displayed on the radar. On the ground radar screen, high-speed taxiways and unusable runways are color-coded.

*You can also select an aircraft by clicking its flight number on the radar screen.

Move position

Wind direction / Wind speed

Your runway may be unusable

*In the insert cut, details such as changes in runway operation are shown.

Aircraft speed in flight

*The number of arrows changes depending on the flight speed.

Hide Sky / Ground toggle button

Zoom bar

Scheduled runway Scheduled spot

*If the display is in a red circle, the aircraft is parked at the spot.

Unusable runway

Change size

Introduction of each function(4)

Introduction of each function(5)

Wind speed

..... Strong wind. Tailwind runway is not available.

..... Light breeze

..... Moderate breeze

* The wind is blowing in the direction of the triangle.

ATC window

The communication contents of the auto section are color-coded in gray.
*In the initial state of the game, the ATC window is not displayed. The display is selected by the icon on the app bar.

Weather forecast window

The forecast of the weather, wind direction, and visibility from the current time to 20 minutes later is displayed. You can change from icon display to text display in the environment settings.

Insert cut

Displays notifications, cautions, and warnings according to the progress of the game.

App bar

Game end button
The game is over.

Screen mode switch button
Toggles between "Window" and "Pop-up" of the game screen display.

Fixed camera point toggle button
Moves to the fixed camera point set in advance.
*The fixed camera point can be confirmed in the airport guide.

Console icon
Shows or hides each console.

Viewpoint switch button
Alternately switches between the "control tower" perspective and the "aircraft" perspective.

- Ship Table
- Aircraft Mini Strip
- AR (visualization of direction and route of aircraft)
- Weather forecast window
- ATC window
- Radar window

Zoom button
Use the Zoom bar to enlarge or reduce the screen.

Volume button
Adjusts the volume of the game BGM.

Time Control
Controls time progress during play.
*Pause / Cancel

*In the initial state of the game, the ATC window is hidden.

Shortcut key

You can also operate using the keyboard.

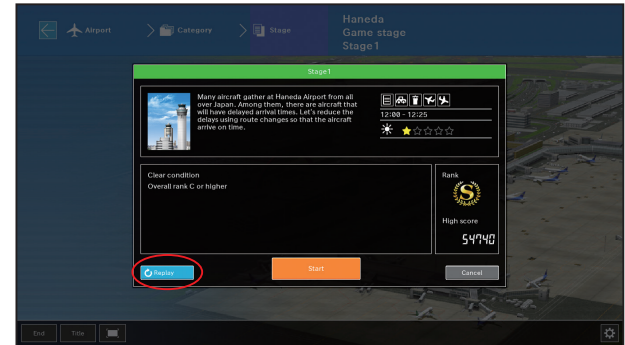

Content	Keyboard operation method
Switching viewpoint	T key
Rotation	W, S, A, D keys
Screen magnification	Page Up key
Screen reduction	Page Down key
Above-ground switching of radar window	Space key
Double speed <i>*Only usable in replay</i>	Tab key
Pause	P key
Game over	Esc key

Result

When the assigned time for each Stage ends, the "Result" screen is displayed. The Stage is evaluated in five Stages of "S> A> B> C> D", and if a clear condition has been achieved, the Stage is cleared.

The content played can be enjoyed by replay. Start by selecting the replay data from [Replay] on the screen to confirm details of each Stage.
**Replay data is updated each time you play the Stage, and can be saved at the end of the game with a name (up to 30 characters).*

Replay allows you to restart the game from anywhere within its timeline.

[Resume] button

Original Stage (1)

From "Schedule / Autumn 2017", you can play by selecting the time zone you want to play, the runway operation, and the section in charge.

*To play on the original schedule of "Schedule / Autumn 2017", Stage 1 must be cleared.

*[Delete] is not displayed if the original Stage has not been created.

Creating Original Stage

On the Create New screen, select the time zone, runway operation, and charge section you want to play, and click [Save].

*In this product, GND (ground) and TWR (tower) are specified as required sections, so the settings cannot be changed.

*You may not be able to play the Original Stage you created properly because the aircraft are automatically placed. In this case, make the start of the assigned time around 10 minutes and create a new Stage and enjoy.

*On a low-spec PC, the Stage start may be delayed for lengthy periods or may not work at all.

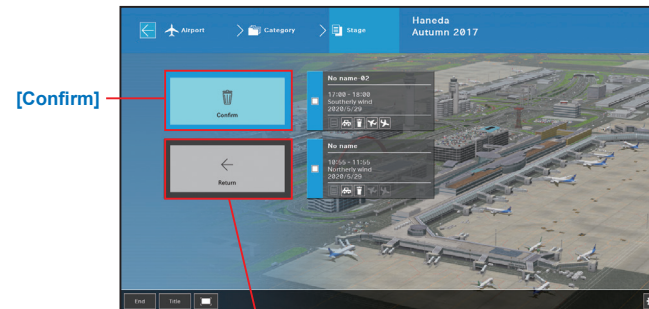

*The name of Original Stage can be up to 30 characters.

Original Stage (2)

Deleting Original Stage

Select the Original Stage you want to delete from the Delete screen and click [OK].

[Return] *You will return to the Select Stage screen of the Original Stage.

Rules in Original Stage

Unlike the normal game Stage, the Original Stage does not have Efficiency Index required to clear the Stage. On the rating gauge, the number of aircraft in charge is displayed as "Guidance completed aircraft". The Time Limit display on the strip is omitted.

Cut your favorite time from the schedule and enjoy a customized Stage just for you.

Configuration

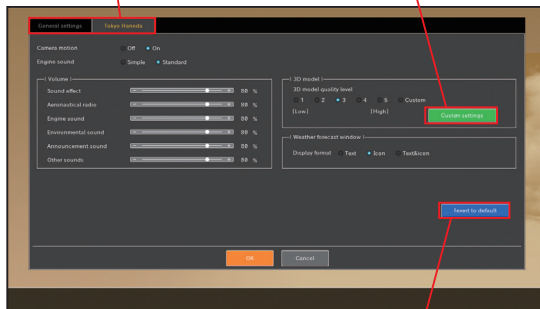

In the Configuration, you can make settings for titles and game menus, and settings for each airport (sound, 3D model, etc.).

*To set the settings for each airport, you need to open Configuration after selecting the airport in the game menu.

Switches to each setting screen.

Revert to Default

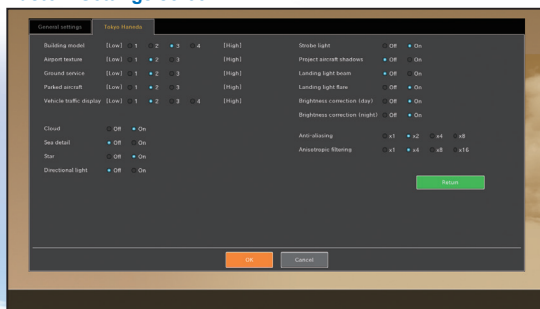

Set the settings for each airport to the state at the time of purchase.

Custom Settings

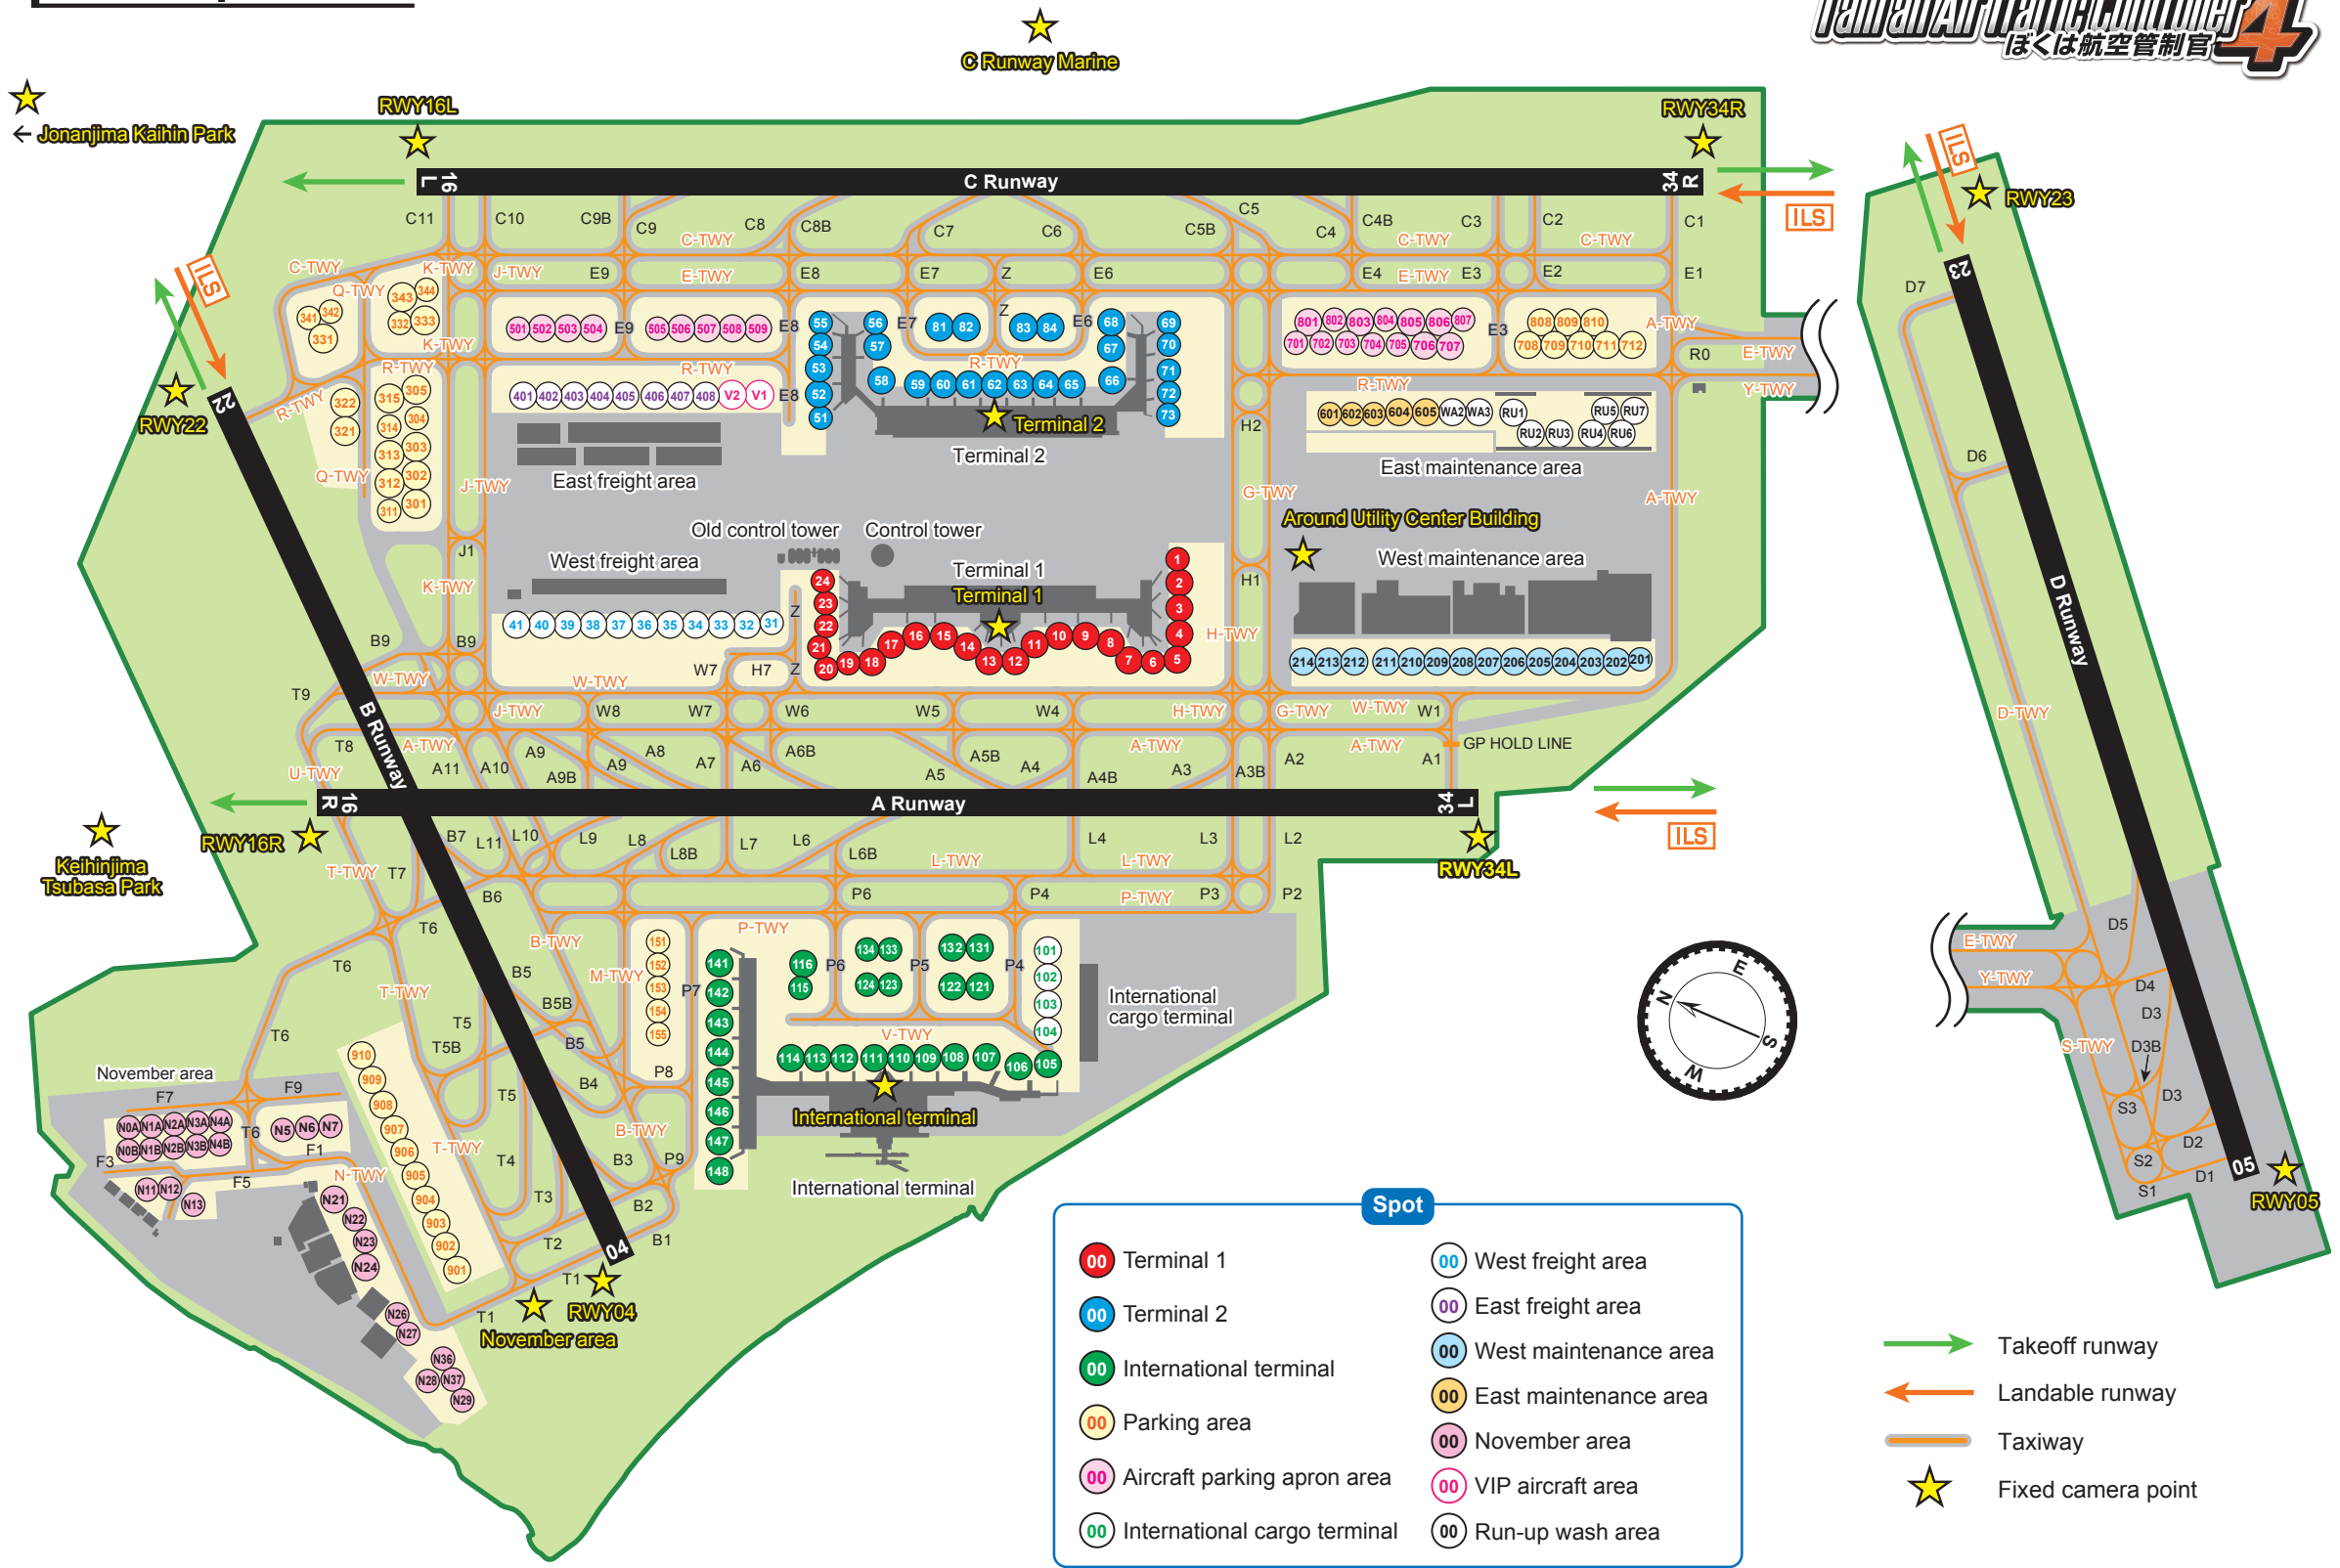

You can change the settings of each item of the 3D model in more detail.
